The 75-KPI Marketing Measurement Cheat Sheet

Every KPI worth tracking across paid search, paid social, web analytics, SEO, local, email, and SMS — with a plain-English definition, a worked example, and when it's actually the right metric to use.

75

KPIS

CHANNELS

Andrew Alicea

Digital Marketing Specialist · andrewalicea21@gmail.com

Organized by channel. Each entry gives you the definition, a worked example with real numbers, and the specific situation where this is the metric to reach for — not just a glossary, but a field guide for deciding what to track and why.

Cross-Channel Foundation

9 KPIs

CAC Customer Acquisition Cost

Total sales & marketing spend divided by the number of new customers acquired in a period.

EXAMPLE

$\$50,000 \text{ spend} \div 250 \text{ new customers} = \200 CAC

BEST TRACKED WHEN

Evaluating overall marketing efficiency and comparing channel profitability. Central to profitable-growth mandates in SaaS and ecommerce; less useful alone in awareness-only phases.

LTV / CLV Customer Lifetime Value

Predicted net revenue or profit a customer generates over the full relationship with the business.

EXAMPLE

$\$80 \text{ AOV} \times 4 \text{ orders/yr} \times 3\text{-yr retention} = \960 LTV

BEST TRACKED WHEN

Setting acceptable CAC ceilings and target LTV:CAC ratios. Essential wherever repeat purchase exists (subscription, DTC, retail); less central for single-purchase categories like real estate.

LTV:CAC LTV-to-CAC Ratio

LTV divided by CAC — the return generated per dollar spent acquiring a customer.

EXAMPLE

$\$960 \text{ LTV} \div \$200 \text{ CAC} = 4.8:1$

BEST TRACKED WHEN

Board and investor reporting, and budget allocation across channels. A ratio below 3:1 usually signals unsustainable acquisition spend; below 1:1 means losing money per customer.

ROAS Return on Ad Spend

Revenue generated per dollar of ad spend, across all paid channels combined.

EXAMPLE

$\$12,000 \text{ revenue} \div \$3,000 \text{ spend} = 4.0 \text{ ROAS}$

BEST TRACKED WHEN

Direct-response and ecommerce campaigns where revenue is trackable per click. Less meaningful for brand-awareness or long B2B sales cycles where revenue lags by months.

MER Marketing Efficiency Ratio

Total revenue divided by total marketing spend across all channels — the blended, platform-agnostic version of ROAS.

EXAMPLE

\$200,000 total revenue ÷ \$40,000 total spend = 5.0 MER

BEST TRACKED WHEN

Multi-channel ecommerce brands where individual platform-reported ROAS is inflated by overlapping attribution claims. Use as the business-level 'north star' efficiency number.

ROI Marketing Return on Investment

(Revenue attributable to marketing – marketing cost) ÷ marketing cost, expressed as a percentage.

EXAMPLE

(\$150,000 – \$50,000) ÷ \$50,000 = 200% ROI

BEST TRACKED WHEN

Justifying budget to finance and leadership. Requires reliable revenue attribution, so it pairs best with CRM-connected reporting in B2B or high-ticket industries.

Payback Period CAC Payback Period

Number of months needed for a customer's gross margin to repay the cost of acquiring them.

EXAMPLE

\$200 CAC ÷ \$40 monthly gross margin = 5-month payback

BEST TRACKED WHEN

SaaS and subscription businesses managing cash flow, runway, and fundraising narratives. Critical before deciding to increase paid spend aggressively.

MQL-SQL MQL-to-SQL Conversion Rate

Percentage of Marketing Qualified Leads that convert to Sales Qualified Leads.

EXAMPLE

400 MQLs → 80 SQLs = 20% conversion

BEST TRACKED WHEN

B2B demand-gen programs aligning marketing and sales. A drop here flags a lead-quality problem distinct from a lead-volume problem.

Pipeline Velocity

Pipeline Value & Velocity

Total dollar value of marketing-sourced or -influenced opportunities, and the speed they move through funnel stages.

EXAMPLE

\$1.2M marketing-sourced pipeline this quarter, 45-day avg stage velocity

BEST TRACKED WHEN

Long B2B sales cycles where revenue lags campaign activity by months. Ties marketing activity to sales outcomes for leadership review.

CTR Click-Through Rate (Search)

Clicks divided by impressions on a search ad.

EXAMPLE

450 clicks ÷ 15,000 impressions = 3.0% CTR

BEST TRACKED WHEN

Diagnosing ad relevance and headline performance early — a leading indicator available before conversion volume is statistically significant.

CPC Cost Per Click

Average amount paid per click on a search ad.

EXAMPLE

\$3,000 spend ÷ 1,000 clicks = \$3.00 CPC

BEST TRACKED WHEN

Managing bid strategy in high-CPC verticals (legal, insurance, finance) and forecasting traffic-volume budgets.

CPA Cost Per Acquisition

Ad spend divided by number of conversions.

EXAMPLE

\$5,000 spend ÷ 100 leads = \$50 CPA

BEST TRACKED WHEN

Lead-gen and ecommerce campaigns with a defined conversion action — the default bid-optimization target for Target CPA strategies.

CVR Conversion Rate (Search)

Conversions divided by clicks.

EXAMPLE

100 conversions ÷ 1,000 clicks = 10% CVR

BEST TRACKED WHEN

Isolating landing-page and offer performance from targeting performance. Read alongside CTR to separate a 'clicks' problem from a 'converting' problem.

QS Quality Score

Google's 1–10 diagnostic of ad relevance, expected CTR, and landing-page experience.

EXAMPLE

Quality Score 7/10 on a core keyword

BEST TRACKED WHEN

Diagnosing high CPCs or weak ad visibility in mature, keyword-based Search campaigns. Not exposed in Performance Max.

Search IS Search Impression Share

Impressions received divided by total eligible impressions available to the campaign.

EXAMPLE

62% impression share (38% lost to budget/rank)

BEST TRACKED WHEN

Diagnosing whether growth is capped by budget or by ad rank — essential when scaling spend in a category with headroom, or defending branded terms.

Abs. Top IS Search Absolute Top Impression Share

Percentage of impressions shown in the very first ad position on the page.

EXAMPLE

40% Absolute Top Impression Share

BEST TRACKED WHEN

Brand-defense campaigns and high-intent commercial keywords, where the top position carries disproportionate CTR.

ROAS Return on Ad Spend (Shopping/PMAX)

Revenue per dollar spent within Google Ads, typically via Shopping or Performance Max.

EXAMPLE

\$8 revenue per \$1 spent = 800% ROAS

BEST TRACKED WHEN

Ecommerce campaigns with purchase-value tracking — the primary target for Target ROAS bidding strategies.

CPM Cost Per Mille (Display/YouTube)

Cost per 1,000 impressions.

EXAMPLE

\$12,000 spend ÷ 2,000,000 impressions = \$6.00

CPM

BEST TRACKED WHEN

Upper-funnel reach campaigns (Display, YouTube, Demand Gen) where awareness — not clicks — is the goal.

Paid Social — Meta Ads

8 KPIs

CPM Cost Per Mille (Meta)

Cost per 1,000 impressions on Facebook or Instagram.

EXAMPLE

\$4.50 CPM

BEST TRACKED WHEN

Awareness and reach objectives, and as an early signal of audience saturation or rising auction pressure.

CPC (Link) Cost Per Link Click

Cost per click to an external destination, distinct from 'all clicks' which includes likes and comments.

EXAMPLE

\$0.85 CPC (link clicks only)

BEST TRACKED WHEN

Traffic campaigns driving to a landing or product page. Always read 'link click,' not 'all clicks,' to avoid vanity inflation.

CTR (Link) Link Click-Through Rate

Link clicks divided by impressions.

EXAMPLE

1.2% link CTR

BEST TRACKED WHEN

Creative testing — the fastest available signal of whether a hook or concept resonates, before conversion volume is meaningful.

Frequency Frequency

Average number of times a unique user has seen the ad within the reporting window.

EXAMPLE

Frequency of 3.4 over 30 days

BEST TRACKED WHEN

Retargeting and always-on campaigns, to catch ad fatigue and creative burnout before CPMs and CPAs start climbing.

CPR Cost Per Result

Cost per the campaign's chosen optimization event — purchase, lead, install, etc.

EXAMPLE

\$18 CPR on a Leads objective

BEST TRACKED WHEN

Comparing efficiency across campaigns that use different objectives on a like-for-like basis. The default headline metric in Ads Manager.

Ad Quality / Engagement / **Rankings** Conversion Ranking

Meta's three relative diagnostics comparing an ad to competitors targeting the same audience.

EXAMPLE

"Below Average (bottom 35%)" on Conversion Rate ranking

BEST TRACKED WHEN

Root-causing underperformance: creative quality vs. landing-page/offer fit vs. audience-conversion mismatch.

Hook Hook Rate (3-Second Video **Rate** Views)

Percentage of viewers who watch at least 3 seconds of a video ad.

EXAMPLE

28% hook rate

BEST TRACKED WHEN

Video and Reels creative testing for scroll-stopping power, especially in crowded feeds (DTC, entertainment, apps).

ROAS Return on Ad Spend (Meta)

Purchase revenue per dollar of ad spend, per Meta's own attribution window.

EXAMPLE

3.5 ROAS

BEST TRACKED WHEN

Ecommerce and app-purchase campaigns. Always cross-check against blended MER — Meta's attribution tends to over-credit itself.

Web Analytics — GA4

7 KPIs

Engaged Sessions Engaged Sessions

Sessions lasting 10+ seconds, containing a key event, or with 2+ pageviews — GA4's engagement threshold.

EXAMPLE

8,400 engaged sessions of 12,000 total

BEST TRACKED WHEN

Assessing content and landing-page quality across any industry. GA4's replacement for the old 'non-bounce' concept.

Engagement Rate Engagement Rate

Engaged sessions divided by total sessions.

EXAMPLE

70% engagement rate

BEST TRACKED WHEN

Comparing traffic-source or landing-page quality. A low rate on paid traffic flags a targeting or landing-page mismatch even when CTR looks healthy.

Avg. Engagement Time Average Engagement Time

Average time a session was actively in focus (not merely open) per active user.

EXAMPLE

1m 42s average engagement time

BEST TRACKED WHEN

Content, editorial, and product-detail pages where dwell time correlates with intent.

Key Events Key Events (Conversions)

GA4's term for events explicitly marked as conversions — purchase, lead-form submit, sign-up, etc.

EXAMPLE

340 key events recorded from "generate_lead"

BEST TRACKED WHEN

Any goal-driven site. Only as reliable as the underlying event setup, so pair with GTM tag-health metrics below.

Sessions/User Sessions per User

Average number of sessions per user within a period.

EXAMPLE

1.8 sessions per user

BEST TRACKED WHEN

Evaluating return-visit behavior for content, media, or high-consideration purchases like B2B and real estate.

DDA Data-Driven Attribution Credit

GA4's default model, which algorithmically distributes conversion credit across touchpoints using observed conversion paths.

EXAMPLE

Paid Social 22% · Organic Search 48% · Direct 30% credit on one conversion

BEST TRACKED WHEN

Multi-touch, multi-channel campaigns where last-click attribution would understate upper-funnel channel value.

Revenue/User Purchase Revenue per User

Total or per-user transactional revenue tracked via ecommerce events.

EXAMPLE

\$14.20 revenue per active user

BEST TRACKED WHEN

Ecommerce — connects traffic data directly to business revenue, feeding MER and ROAS calculations upstream.

Fire Rate Tag Firing Success Rate

Percentage of intended tag fires that execute without error, verified via preview/debug mode or a QA tool.

EXAMPLE

98.5% fire rate across production tags

BEST TRACKED WHEN

Post-launch QA after any container publish, and periodically wherever paid bidding algorithms depend on clean signal (Google, Meta both need it to optimize).

Data Layer Completeness

Data Layer Completeness

Percentage of required dataLayer variables present and correctly typed across page and event types.

EXAMPLE

92% of product-page views push a complete ecommerce object

BEST TRACKED WHEN

Ecommerce and lead-gen sites before scaling paid spend — incomplete data layers silently under-report conversions and mislead bid algorithms.

Publish Error Container Publish Rate

Error Rate

Frequency of GTM container versions published with tag or trigger misconfigurations that later require rollback.

EXAMPLE

1 rollback in the last 14 publishes

BEST TRACKED WHEN

Teams with multiple contributors editing GTM — justifies a formal QA and versioning workflow.

Consent Coverage

Consent Mode Coverage

Percentage of sessions where consent state is correctly signaled before tags fire, for regions under GDPR/CCPA.

EXAMPLE

100% of EU sessions gated by Consent Mode v2

BEST TRACKED WHEN

Any business serving EU, UK, or California traffic — required for compliance and directly affects whether Google can model conversions for consent-denied users.

Duplicate Rate Duplicate / Ghost Tracking Rate

Percentage of events fired more than once per user action due to redundant tags.

EXAMPLE

6% duplicate purchase events inflating reported revenue

BEST TRACKED WHEN

Auditing after a platform migration (e.g., Universal Analytics → GA4) or an agency handoff, where legacy tags often linger unnoticed.

Engagement Rate**Engagement Rate (Organic)**

Likes, comments, shares, and saves divided by reach or follower count.

EXAMPLE

4.2% engagement rate on an Instagram post

BEST TRACKED WHEN

Brand-awareness and community goals — a more meaningful read on content resonance than raw follower count.

Reach

Number of unique accounts that saw a post.

EXAMPLE

45,000 reach on a Reel

BEST TRACKED WHEN

Awareness campaigns and evaluating algorithmic distribution of content independent of follower base.

Impressions

Total number of times content displayed, including repeat views by the same account.

EXAMPLE

61,000 impressions vs. 45,000 reach (1.35 avg views/viewer)

BEST TRACKED WHEN

Comparing content frequency, e.g., Stories sequences or retargeting-style organic content.

Follower Growth**Follower Growth Rate**

Net new followers divided by starting follower count over a period.

EXAMPLE

+1,200 net followers ÷ 30,000 starting = 4% monthly growth

BEST TRACKED WHEN

Early-stage brand building. De-prioritize once a channel matures and engagement or conversion matter more than audience size.

SOV Share of Voice (Social)

Brand's mentions or engagement volume as a percentage of total category conversation.

EXAMPLE

18% share of voice vs. the top 4 competitors

BEST TRACKED WHEN

Crowded, competitive categories (CPG, retail, media) where relative presence matters more than absolute volume.

Completion Rate**Video Completion / View-Through Rate**

Percentage of viewers who watch a video to completion or a set threshold (e.g., 75%).

EXAMPLE

34% completion rate on a 15-second Reel

BEST TRACKED WHEN

Storytelling and brand-narrative content — signals whether length and pacing match audience attention span.

Amplification Amplification Rate

Shares divided by total reach or followers.

EXAMPLE

0.8% amplification rate

BEST TRACKED WHEN

Evaluating word-of-mouth potential — most relevant for content explicitly designed to be shared (UGC, cause marketing, contests).

SEO / Organic Search

8 KPIs

Organic Traffic Organic Traffic

Sessions arriving via unpaid search engine results.

EXAMPLE

22,000 organic sessions per month

BEST TRACKED WHEN

The core top-of-funnel health metric for any content- or SEO-led business — media, SaaS blogs, ecommerce category pages.

Visibility Keyword Rankings / Visibility Score

Tracked position for target keywords, often aggregated into a weighted visibility index across a keyword set.

EXAMPLE

Avg. position 4.2 across 150 tracked terms; visibility score 62/100

BEST TRACKED WHEN

Competitive categories where rank volatility from algorithm updates or new competitor content needs catching before traffic actually drops.

Organic CTR Organic CTR (SERP)

Clicks divided by impressions in Search Console, by query or page.

EXAMPLE

3.8% CTR at position 4

BEST TRACKED WHEN

Diagnosing title-tag and meta-description effectiveness independent of ranking position — a page can rank well and still underperform.

DA / DR Domain Authority / Domain Rating

Third-party composite score (Moz/Ahrefs) predicting ranking strength, driven largely by backlink profile.

EXAMPLE

Domain Rating 54

BEST TRACKED WHEN

Competitive benchmarking and prioritizing link-building investment. Directional only — not a Google metric, don't over-index day to day.

Ref. Domains Referring Domains / Backlinks

Count of unique external domains, and total links, pointing to the site.

EXAMPLE

310 referring domains, up from 260 last quarter

BEST TRACKED WHEN

Authority-building phases for newer sites, and measuring digital PR campaign output.

Organic CVR Organic Conversion Rate

Conversions from organic-search sessions divided by organic sessions.

EXAMPLE

2.1% organic conversion rate

BEST TRACKED WHEN

Proving SEO's revenue contribution to leadership — not just traffic volume — especially when justifying continued content investment.

CWV Core Web Vitals (LCP / INP / CLS)

Google's page-experience metrics: Largest Contentful Paint (load speed), Interaction to Next Paint (responsiveness), Cumulative Layout Shift (visual stability).

EXAMPLE

LCP 2.1s · INP 180ms · CLS 0.05 — all "Good"

BEST TRACKED WHEN

Technical SEO audits on any site, especially ecommerce and publisher sites, where Google has confirmed these as ranking and UX factors.

Index Coverage Index Coverage / Crawl Error Rate

Percentage of submitted URLs successfully indexed vs. excluded or errored, per Search Console.

EXAMPLE

96% of 1,200 submitted URLs indexed; 4% "crawled, not indexed"

BEST TRACKED WHEN

Large sites — ecommerce catalogs, programmatic SEO, publishers — where crawl budget and indexation bugs can silently cap organic growth.

Local — Google Business Profile

6 KPIs

GBP Views GBP Total Views (Search + Maps)

Number of times the business profile was viewed on Google Search and Maps combined.

EXAMPLE

8,200 profile views per month

BEST TRACKED WHEN

Local service businesses and multi-location retail measuring visibility in local search before it converts to action.

Directions Direction Requests

Number of users who tapped "Directions" from the profile.

EXAMPLE

340 direction requests per month

BEST TRACKED WHEN

Businesses reliant on foot traffic — restaurants, retail, healthcare clinics. A strong proxy for offline visit intent.

Call Clicks Call Clicks

Number of phone calls initiated directly from the GBP listing.

EXAMPLE

210 call clicks per month

BEST TRACKED WHEN

Service businesses where the phone call is the primary conversion action — home services, legal, medical — rather than a web form.

Website Clicks

Website Clicks (from GBP)

Number of clicks to the business website originating from the profile.

EXAMPLE

190 website clicks per month

BEST TRACKED WHEN

Businesses moving local searchers into a fuller funnel — booking flow, menu, portfolio — rather than converting on the profile itself.

Reviews Review Rating & Volume

Average star rating and total count of Google reviews.

EXAMPLE

4.6★ across 312 reviews, +14 new this month

BEST TRACKED WHEN

Trust-sensitive local categories — healthcare, home services, hospitality — where rating directly influences Local Pack ranking and click-through.

Local Pack Rank

Local Pack (Map Pack) Ranking

Position within Google's top-3 local results shown for a given search-plus-location query.

EXAMPLE

Ranks #2 in the Map Pack for "emergency plumber [city]"

BEST TRACKED WHEN

Any single- or multi-location local business competing on proximity, relevance, and prominence — the single highest-leverage local SEO metric to track by keyword and location.

Email Marketing

9 KPIs

Open Rate Open Rate

Percentage of delivered emails opened, tracked via pixel.

EXAMPLE

220 opens ÷ 1,000 delivered = 22% open rate

BEST TRACKED WHEN

Subject-line testing and send-time optimization — but read directionally, not literally: iOS 15+ Mail Privacy Protection auto-triggers opens for a large share of Apple Mail users, inflating the number.

CTR Click-Through Rate (Email)

Clicks divided by delivered emails.

EXAMPLE

45 clicks ÷ 1,000 delivered = 4.5% CTR

BEST TRACKED WHEN

The core engagement metric for promotional and lifecycle sends — less distorted by privacy proxies than open rate, so more trustworthy for judging real interest.

CTOR Click-to-Open Rate

Clicks divided by opens — isolates content and CTA performance from subject-line/deliverability performance.

EXAMPLE

45 clicks ÷ 220 opens = 20.5% CTOR

BEST TRACKED WHEN

Creative and CTA testing within an already-opened cohort — the cleanest read on whether the body content itself is working.

CVR Conversion Rate (Email)

Conversions divided by delivered (or clicked) emails.

EXAMPLE

18 purchases ÷ 1,000 delivered = 1.8% CVR

BEST TRACKED WHEN

Ecommerce and lead-gen email judged on revenue or pipeline outcome rather than engagement alone.

RPE Revenue Per Email

Revenue generated divided by emails sent or delivered.

EXAMPLE

\$2,400 revenue ÷ 20,000 sent = \$0.12 RPE

BEST TRACKED WHEN

Comparing campaign ROI across sends of different sizes — especially for ecommerce lifecycle flows like abandoned cart and post-purchase.

List Growth List Growth Rate

Net new subscribers divided by total list size over a period.

EXAMPLE

+500 net new ÷ 20,000 existing = 2.5% monthly growth

BEST TRACKED WHEN

Early-stage owned-audience building. Always read alongside unsubscribe rate — growth without retention just churns the list faster.

Unsub Rate Unsubscribe Rate

Unsubscribes divided by delivered emails.

EXAMPLE

8 unsubscribes ÷ 1,000 delivered = 0.8%

BEST TRACKED WHEN

Diagnosing send-frequency fatigue or content-relevance mismatch — watch closely during win-back campaigns and immediately after any list migration.

Inbox Placement Deliverability / Inbox Placement Rate

Percentage of sent emails that land in the inbox — not spam — across major providers.

EXAMPLE

94% inbox placement across a Gmail/Outlook/Yahoo seed-list panel

BEST TRACKED WHEN

Any list at scale. A silent upstream killer of every other metric if domain reputation degrades — check after a volume increase or a purchased/imported list.

Bounce Rate Bounce Rate (Hard / Soft)

Percentage of sends that fail to deliver — hard (permanent, e.g. invalid address) vs. soft (temporary, e.g. mailbox full).

EXAMPLE

1.2% hard bounce, 0.6% soft bounce

BEST TRACKED WHEN

List hygiene audits. Hard bounce rates above roughly 2% put sender reputation at risk and should trigger a list-cleaning pass.

SMS Marketing

7 KPIs

Opt-In Rate Opt-In Rate

Percentage of eligible contacts — site visitors, checkout customers — who subscribe to SMS.

EXAMPLE

$320 \text{ opt-ins} \div 8,000 \text{ eligible sessions} = 4\% \text{ opt-in rate}$

BEST TRACKED WHEN

Early-phase SMS launch or testing new acquisition placements (checkout, popup, post-purchase) — the metric that matters before the channel has volume to optimize anything else.

Delivery Rate Delivery Rate

Percentage of sent messages successfully delivered to carrier and handset.

EXAMPLE

98.2% delivery rate

BEST TRACKED WHEN

Infrastructure health check — a drop usually signals carrier filtering or a 10DLC registration/compliance issue, not a creative problem.

CTR Click-Through Rate (SMS)

Link clicks divided by delivered messages.

EXAMPLE

$120 \text{ clicks} \div 5,000 \text{ delivered} = 2.4\% \text{ CTR}$

BEST TRACKED WHEN

Flash sales, time-sensitive promos, and abandoned-cart recovery — SMS CTR typically runs well above email CTR because of near-instant read behavior.

CVR Conversion Rate (SMS)

Conversions attributed to the SMS send divided by delivered messages.

EXAMPLE

$40 \text{ purchases} \div 5,000 \text{ delivered} = 0.8\% \text{ CVR}$

BEST TRACKED WHEN

Ecommerce flash-sale and cart-recovery flows, where SMS frequently outperforms email conversion rate due to immediacy.

RPM Revenue Per Message

Revenue generated divided by messages sent.

EXAMPLE

\$1,800 revenue ÷ 5,000 sent = \$0.36 RPM

BEST TRACKED WHEN

Comparing SMS program ROI against email RPE — SMS costs meaningfully more per send, so this is what justifies the channel's spend.

Opt-Out Rate Opt-Out Rate

STOP replies divided by delivered messages.

EXAMPLE

25 opt-outs ÷ 5,000 delivered = 0.5%

BEST TRACKED WHEN

Monitoring frequency fatigue on every single send, not just periodically — audience tolerance for over-messaging is much lower on SMS than email.

Response Rate Rate (Conversational SMS)

Percentage of recipients who reply to a two-way message, distinct from STOP replies.

EXAMPLE

6% reply rate on a "Reply YES for early access" send

BEST TRACKED WHEN

Conversational commerce, customer service SMS, and appointment-based local businesses using confirm/reschedule flows.

Want this live, filterable, and tied to your own numbers?

This cheat sheet is a static snapshot of The Measurement Console — a free tool with flip-to-benchmark cards, a client-fit matcher, root-cause diagnostics, a measurement plan builder, an ad copy workbench, and a plain-English readout generator, all sharing this same 75-KPI set.
